

Technical Bulletin Bracket Transition A-081-G to MBB-081

Notice:

The A-081-G bracket has been replaced by the MBB-081. The A-081-G will no longer be available to purchase. The MBB-081 will be available for both new applications and replacements of the A-081-G.

Reason for change:

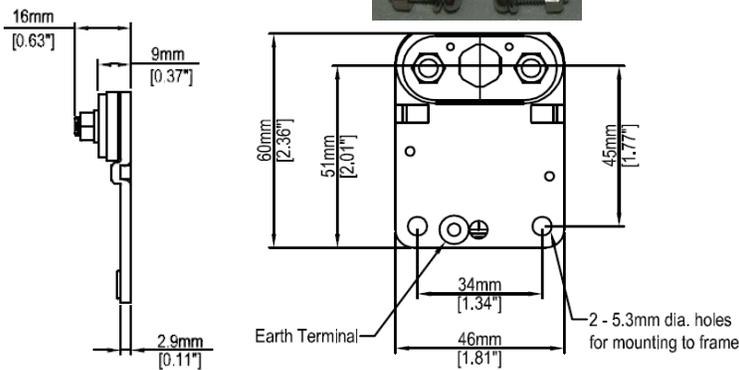

The MBB-081 is a universal mounting bracket that will become the standard for all DC rollers that have a plain 7/16" Hex shaft.

Features:

- The shaft hole of the middle mounting plate is rotated a few degrees which grips the shaft securely once the top plate and nuts are tightened to the correct torque.

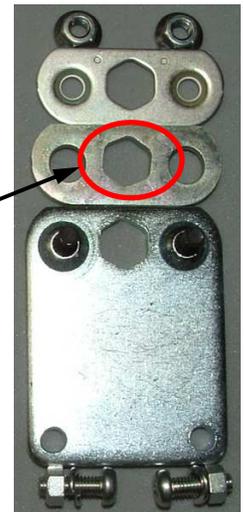

Old

A-081-G

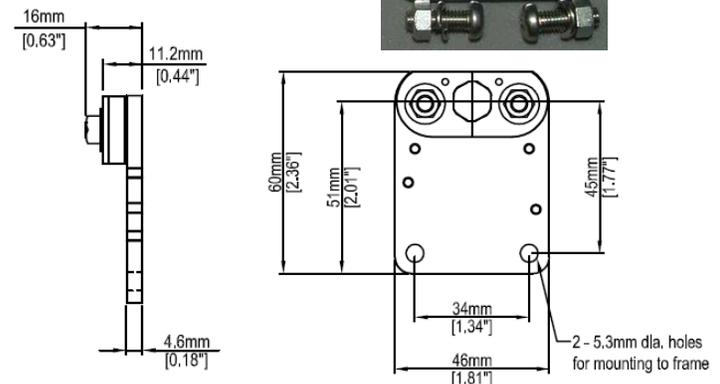

New

MBB-081

Rotated shaft hole
