## CBK-109FN/FP

## Driver Card Manual

## FEATURES:

Designed for use with the high torque FH \& KT series rollers.

- Adjustable acceleration and deceleration time (0 to 2.5s)
- Stable speed operation

Switch for manual or automatic recovery of the thermal overload device

- One (1) DIP switch combined with one (1) rotary switch to select up to 20 different fixed speeds
$\square$ DIP switch to select the condition of error signal activity; during normal status or abnormal status
$\square$ Forcibly stops the motor if motor lock or thermal overload error lasts for 0.5 seconds or more.
- Three (3) LEDs (green, red, \& orange) to identify the type of error and number of error occurrences
- Pulse signal output to indicate motor revolution
RoHS and EMC Conformity
Negative Load Control to keep set speed.
Control the speed when the speed exceeds the set speed by 10\% or more. Control the speed when the speed exceeds the set speed by $12 \%$ or more while accelerating or decelerating.

Press down spring clamp in connector with a small screwdriver.
Insert leads in proper order.
Lead should be stripped approx: 0.31~0.35"
WAGO connector (included) must be inserted and/or pulled out carefully, so as not to damage other parts

## SPECIFICATIONS

ELECTRICAL: 24 V DC $\pm 10 \%$ input

- Battery
- Power Supply: full wave rectified with smoothed current and <10\% Ripple Power ON delay <1s
6.6~7.4A locking current Input signal level for activation
- OV (3V or less) for NPN
- 24V (18V or greater) for PNP

Output (Error and Motor Pulse) signals

- Open collector $24 \mathrm{~V}, 25 \mathrm{~mA}$ or less
- NPN
- PNP (selectable for Error only)

## APPLICABLE MODELS: FH, kT

BRAKE: Dynamic (Electric)

PROTECTION: Thermal protection reaction

*To reset an error condition: Remove input signals; then reapply an input signal to either CN2-1 or CN2-2
**|f thermal device recover is set for automatic, the error will reset 1 min after the temperature has reached operating range.

## LED AND ERROR INDICATIONS:

## RED LED INDICATION: - ERROR CONDITION:

The red LED indicates the current error condition in conjunction with the green LED

| No Error | Motor Lock | Low Voltage (<15V) | Fuse Blown* | Current Limit ${ }^{*}$ | Thermal Protection | Back EMF |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## ORANGE LED INDICATION: - ERROR OCCURRENCE:

The orange LED indicates the number of consecutive occurrences of the current error condition indicated by the red LED. If the previous error differs from the current error, a combination status will be displayed.

| No <br> Error | $\mathbf{1}$ | $\mathbf{2}$ | $\mathbf{\geq 3}$ | Combination |
